Flat Pack

The Nova Rack is a full flat-packageable Rack, giving the customer versatility for those difficult access sites.

Flat packing also enables the Nova Rack to be an excellent space saver for shipping.

The Nova Rack base frame consists of 8 (eight) sub-assembly components, which assemble together using one tool.

The frame has a bayonet system, which makes it very easy to attach the mainframe to the depth reducers.
A full instruction manual is supplied with the Rack.
