

## SWITCHES

BustQue offers a full-range of reliable network switches, such as unmanaged, smart managed, Layer 2 Managed, industrial, and PoE. BustQue's managed switches support several advanced switch features, such as VLAN, LACP, QoS, and IGMP snooping. We also offer specialty switches for unique, custom installation, such as surveillance switches, rail switches, flat switches, NVR switches, and AV switches.

Our feature-rich switches are available with support for PoE, PoE+, UPoE, and 4PPoE; multi-gigabit, 2.5G, and 10G; and plastic or metal housing. For better installation flexibility, our switches are also available in different form factors, such as rackmount, desktop, wall-mount, and DIN-Rail.

Embedded GREENnet technology helps you to reduce your energy costs by reducing power consumption by up to 70 percent. BustQue's GREENnet energy savings technology automatically adjusts power consumption as need.

### Managed

Multi-Gigabit / 10G

### Industrial

### Specialty Switches

## Unmanaged Switches
